1. Need Youtebe Data API Key from Google console, and replace it in youtubeApi.php
2. Need set up localConfig file for database connection
3. Replace your own sql initData.php file, and run it. It will create a database to store all information request from youtube api based on the values the query returns.
4. After the video information is inserted into database, browse to playground.php which you can view and manage all video information inserted.
